USB HD Endoscopic Camera System

The easy endoscopic solution for presentation and documentation of images

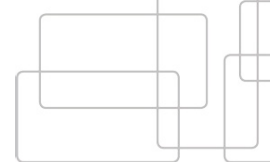

The handy and high-resolution endoscopy camera was specially developed for the medical practice and allows the user a maximum of flexibility. The standardized C-Mount threaded connection provides safely problem-free adaptation to almost all common endoscopes. The camera is connected to a computer via a standard USB 3.0 interface and the operation is carried out via the supplied software. Numerous functions such as live image, still image, image and video recording are available and can be triggered with the two buttons on the camera head. Another special feature is the LED light source supplied. The light source is supplied via the USB port and makes an external light source and light-cable unnecessary.

- Full HD 1080p video
- Resolution 1920 x 1080 p
- Configured via USB 3.0 interface
- Simply "plug and play"
- Adaptable LED light source
- IPX8 class tightness tested
- Compatible with almost all endoscopes of the known manufacturers
- GDT interface possible
- Automatic white balance
